

Key Programming Software Update compatible with Toyota* ADS2328 - Code D756605AD

May 2023

Now programmes Toyota* bladed keys via the OBD even in an all keys lost situation.

What does the software do?

The software programmes **both proximity and bladed keys** for a selection of popular Toyota* models like the Aygo, RAV4 and the C-HR. When used together with the ADC2015 emulator, and for bladed keys the new immobiliser bypass cable ADC2016, replacement keys can be programmed even in an all keys lost situation. For proximity keys programming is done directly via the OBD without need of a bypass cable even for models with a Secure Gateway Module. The software bypasses the security pincode and programmes the remote and transponder at the same time.

Server Connection required

For certain procedures the AD2328 software requires an internet connection to access the programming calculation in the proprietary Advanced Diagnostics server.

What else is needed?

OFFER DETAILS	Using tokens	Using UTP	Using purchased software
Cable	ADC2000	ADC2000	ADC2000
Software category	A	A	A
Smart Aerial required	No	No	No
Server connection & key programming	1 token (some procedures require 3 tokens)	Included	Included
